## SSN College of Engineering

Vishakan Subramanian - 18 5001 196 - Semester VI

13 April 2021

---

### UCS 1611 - Internet Programming Lab

---

#### Exercise 6: Autocomplete Feature Using AJAX

##### Learning Objective:

1. Develop an AJAX program that implements the Autocomplete feature for filling the country names.
2. For Example, when N is entered all the names of the country starting with “N” should be listed in drop-down list for user’s easy selection.
3. When “Na” is typed only “Namibia” and “Nauru” should be listed for selection.
4. Use Servlet for server side scripting.
5. Use MySQL database to store the countries names.

## Code - Search Page HTML:

```
1 <!DOCTYPE html>
2 <html>
3
4 <head>
5     <title>Autocomplete Using AJAX</title>
6     <link rel="stylesheet" href="styles.css">
7 </head>
8
9 <body>
10
11     <h1>Select Your Country</h1><hr><br>
12
13     <div align="center">
14         <p id="info"></p>
15     </div>
16
17     <div id="dropdown" align="center" class="dropdown-list">
18         <input list="country-data" id="country-input" name="country-input"
19         onkeyup="filterCountries()" />
20         <datalist id="country-data">
21             </datalist>
22     </div>
23
24
25     <footer>
26         &copy; Vishakan Subramanian 2021
27     </footer>
28
29     <script src="scripts/index.js"></script>
30 </body>
31
32 </html>
```

## Code - CSS Code:

```
1 @import url('https://fonts.googleapis.com/css2?family=Montserrat&display=
  swap');
2
3 body {
4     background: rgb(103,212,159);
5     background: radial-gradient(circle, rgba(103,212,159,1) 0%, rgba
      (113,217,236,1) 100%);
6     font-family: 'Montserrat', sans-serif;
7     font-size: 150%;
8
9 }
10
11 h1 {
12     text-align: center;
13 }
14
15 input{
16     font-size: 25px;
17     font-family: 'Montserrat', sans-serif;
18     font-weight: bold;
19
20 }
21
22 p{
23     text-align: center;
24     font-weight: bold;
25     color: red;
26     font-size: 30px;
27 }
28
29 footer {
30     position: fixed;
31     bottom: 0;
32     color: black;
33     font-weight: bold;
34     border-top: 3px solid black;
35     padding: 5px 5px 5px 5px;
36     text-align: center;
37     width: 100%;
38 }
```

## Code - Search Page JavaScript:

```
1 filterCountries = () => {
2     //filter the countries based on name
3
4     let input = document.getElementById("country-input");
5     let value = input.value.trim().toUpperCase();
6
7     let xhttp = new XMLHttpRequest();
8     let url = 'FetchServlet?queryString=${value}';
9
10    xhttp.onreadystatechange = function () {
11        if(this.readyState == 4 && this.status == 200){
12            autoComplete(value, this);
13        }
14    };
15
16    xhttp.open('GET', url, true);
17    xhttp.send();
18 }
19
20 autoComplete = (value, xml) => {
21     //populate the datalist's options by parsing the XML document response
22
23     let i = 0;
24     let xmlDoc = xml.responseXML;
25     console.log(xmlDoc);
26
27     let root = document.getElementsByTagName("datalist");
28     root = root[0];
29     removeAllChildNodes(root); //remove all option nodes from the
    datalist
30
31     let x = xmlDoc.getElementsByTagName("country");
32
33     //displaying the number of records found
34     let info = document.getElementById("info");
35     info.innerHTML = ""; //clear the existing content
36
37     if(value != ""){
38         //display if queryString isn't an empty string
39         info.innerHTML = 'Found ${x.length} record(s) that match ${value
    }';
40     }
41
42     for(i = 0; i < x.length; i++){
43         //set the option nodes with its values for the datalist
44         let item = x[i].childNodes[0].nodeValue;
45         let optionNode = document.createElement("option");
```

```
46         optionNode.setAttribute("value", item);
47         root.appendChild(optionNode);
48     }
49 }
50
51 removeAllChildNodes = (parent) => {
52     //to remove all existing child nodes of an HTML element
53
54     while (parent.firstChild) {
55         parent.removeChild(parent.firstChild);
56     }
57 }
```

## Code - Web XML:

```
1 <web-app>
2   <servlet>
3     <servlet-name>FetchServlet</servlet-name>
4     <servlet-class>FetchServlet</servlet-class>
5   </servlet>
6
7   <servlet-mapping>
8     <servlet-name>FetchServlet</servlet-name>
9     <url-pattern>/FetchServlet</url-pattern>
10  </servlet-mapping>
11
12  <welcome-file-list>
13    <welcome-file>index.html</welcome-file>
14  </welcome-file-list>
15 </web-app>
```

## Code - FetchServlet:

```
1 import java.io.*;
2 import javax.servlet.*;
3 import javax.servlet.http.*;
4 import java.sql.*;
5
6 public class FetchServlet extends HttpServlet{
7     public void doGet(HttpServletRequest req, HttpServletResponse res)
8         throws ServletException, IOException{
9
10         String JDBC_DRIVER = "com.mysql.cj.jdbc.Driver";
11         String DB_URL = "jdbc:mysql://localhost:3306/mysql?autoReconnect=
true&useSSL=false";
12         String USER = "admin";
13         String PASS = "password";
14
15         PrintWriter out = res.getWriter();
16
17         String queryString = req.getParameter("queryString");
18
19         //setting content type to XML
20         res.setContentType("text/xml;charset=UTF-8");
21
22         //Writing a raw XML document
23         out.append("<?xml version=\"1.0\" encoding=\"UTF-8\"?>");
24         out.append("<country_list>");
25
26         try{
27             Class.forName(JDBC_DRIVER);
28             Connection conn = DriverManager.getConnection(DB_URL, USER,
PASS);
29             String query = "SELECT name FROM country WHERE name REGEXP \""
+ queryString + "\"";
30             Statement stmt = conn.createStatement();
31
32             ResultSet rs = stmt.executeQuery(query);
33
34             while(rs.next()){ //appending queried countries to the XML
35                 String country = rs.getString("name");
36                 out.append("<country>" + country + "</country>");
37             }
38
39             out.append("</country_list>");
40
41             conn.close(); //must close connection here as we may make
too many requests
42         }
43     }
```

```
44
45     catch(SQLException se){
46         se.printStackTrace();
47         out.println(se);
48     }
49     catch(Exception e){
50         e.printStackTrace();
51         out.println(e);
52     }
53 }
54 }
```

## Code - SQL Script:

```
1 /*Creating the countries table*/
2
3 USE mysql;
4
5 DROP TABLE country;
6
7 CREATE TABLE country(
8     name varchar(80) NOT NULL
9 );
10
11
12 INSERT INTO country VALUES
13 ('AFGHANISTAN'),

## Output - Search Page:

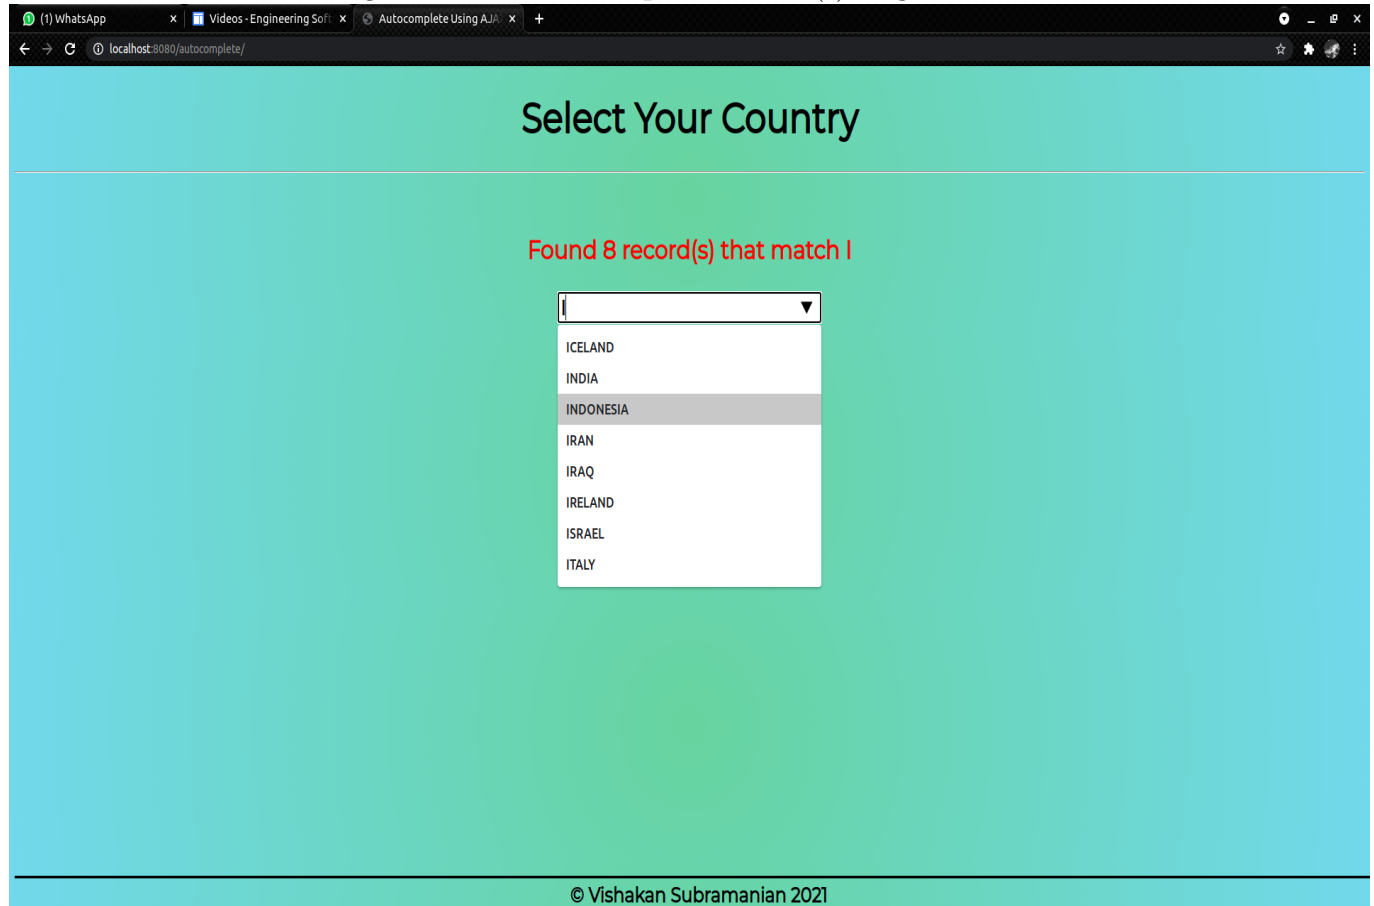

Figure 1: Browser Output: Search Page.

The image shows a web browser output of a search page. The page has a light blue background. At the top, the text "Select Your Country" is displayed in a large, black, sans-serif font. Below this text, there is a white rectangular dropdown menu with a black border and a small black downward-pointing triangle on the right side. At the bottom of the page, there is a thin black horizontal line, and below it, the text "© Vishakan Subramanian 2021" is displayed in a small, black, sans-serif font.

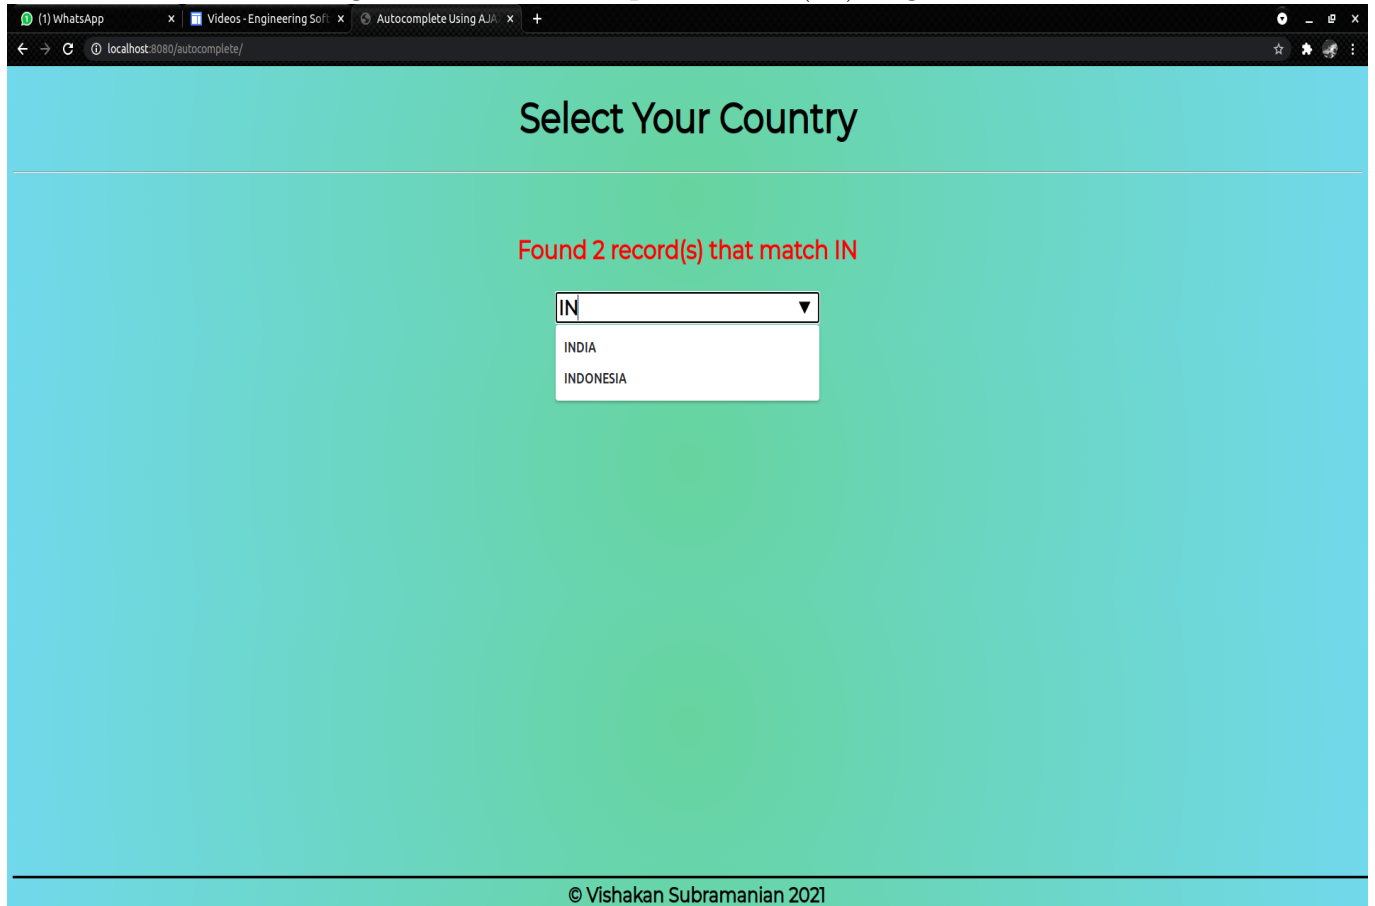

## Output - Search (I) Page:

Figure 2: Browser Output: Search (I) Page.

## Output - Search (IN) Page:

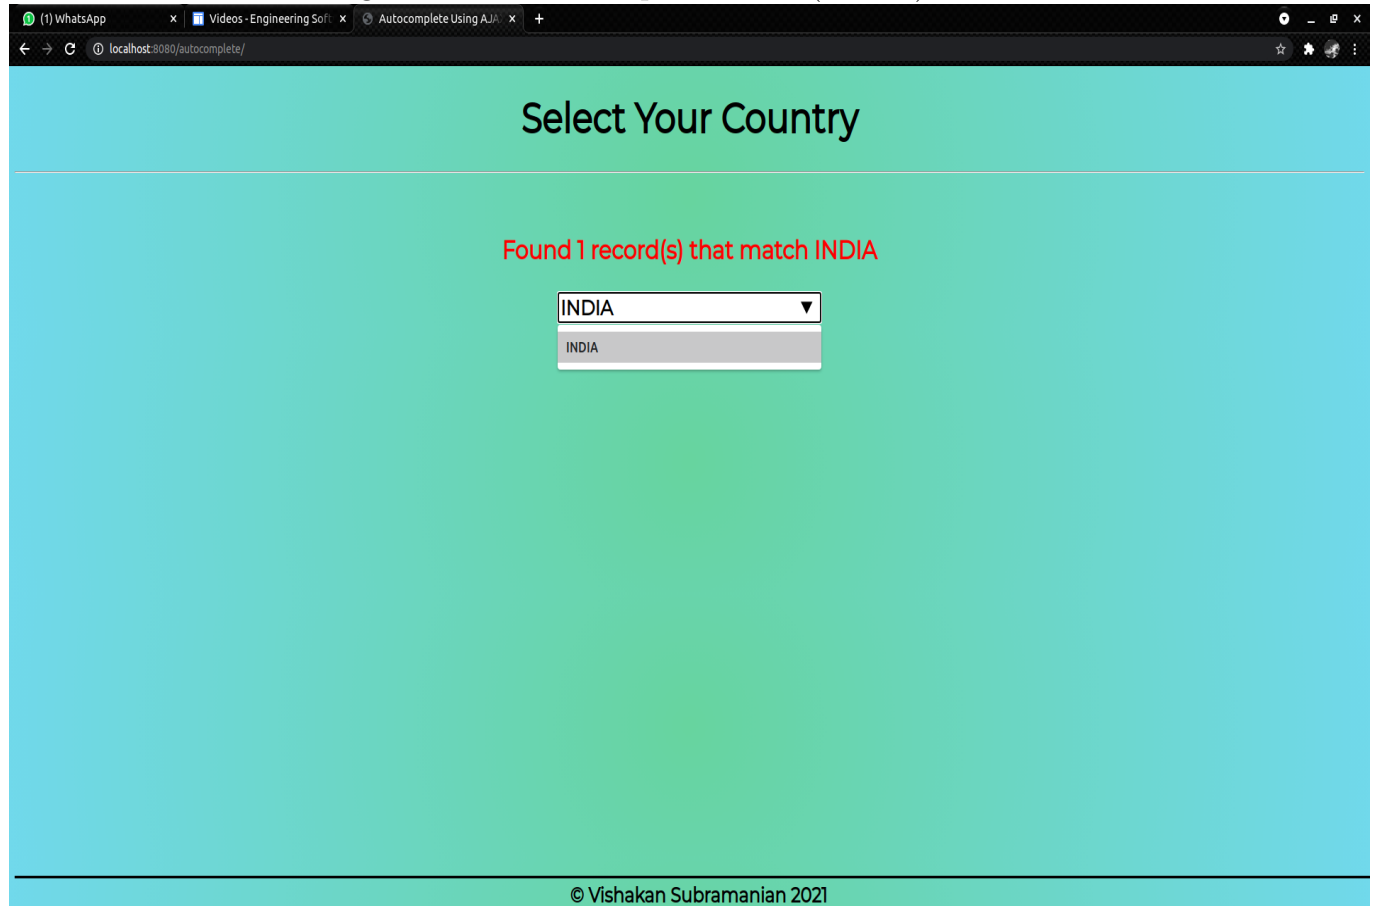

Figure 3: Browser Output: Search (IN) Page.

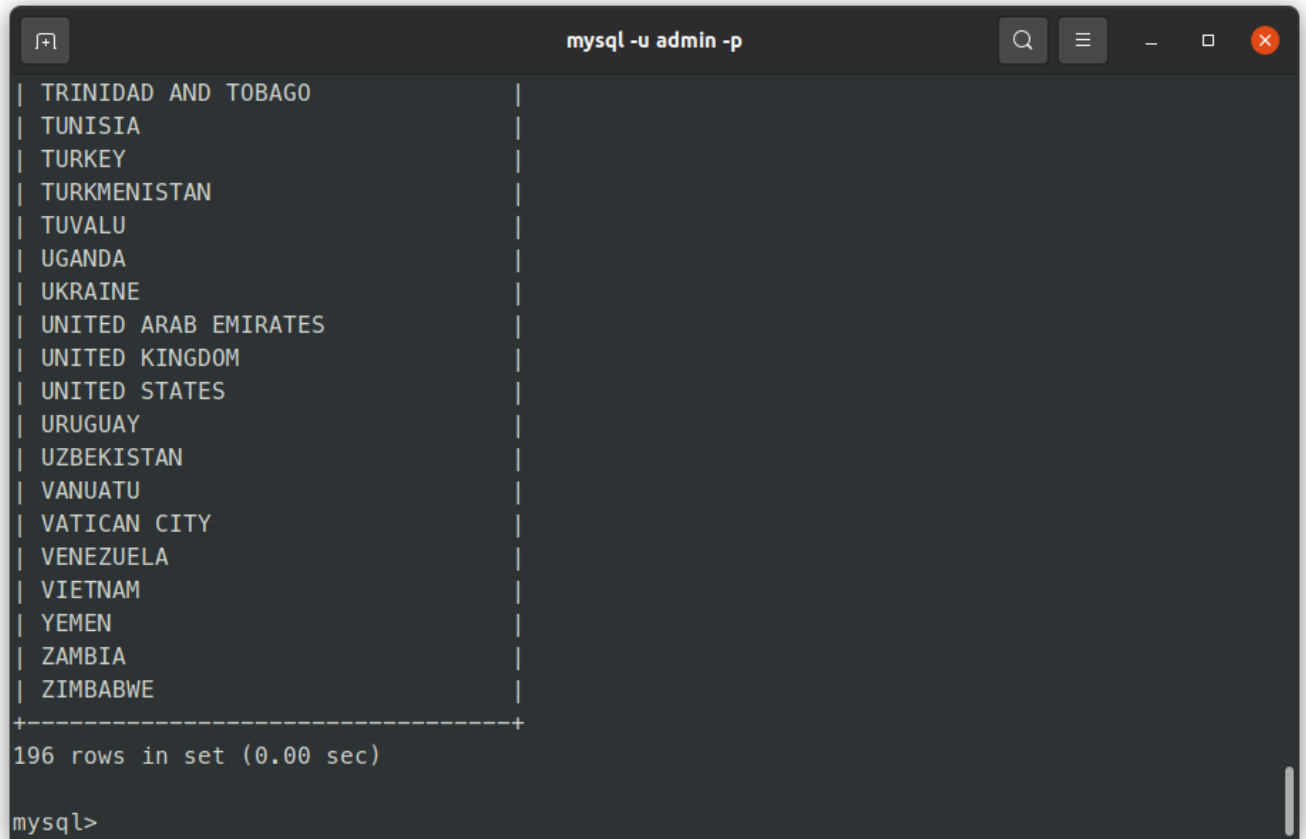

## Output - Search (INDIA) Page:

Figure 4: Browser Output: Search (INDIA).

## Output - SQL Table:

Figure 5: Browser Output: SQLTable.

A screenshot of a MySQL terminal window. The title bar reads "mysql -u admin -p". The terminal displays a list of 19 countries, each preceded by a vertical bar. The list is: TRINIDAD AND TOBAGO, TUNISIA, TURKEY, TURKMENISTAN, TUVALU, UGANDA, UKRAINE, UNITED ARAB EMIRATES, UNITED KINGDOM, UNITED STATES, URUGUAY, UZBEKISTAN, VANUATU, VATICAN CITY, VENEZUELA, VIETNAM, YEMEN, ZAMBIA, and ZIMBABWE. Below the list, a dashed line separates it from the summary text "196 rows in set (0.00 sec)". The prompt "mysql>" is visible at the bottom.

```
mysql -u admin -p
| TRINIDAD AND TOBAGO
| TUNISIA
| TURKEY
| TURKMENISTAN
| TUVALU
| UGANDA
| UKRAINE
| UNITED ARAB EMIRATES
| UNITED KINGDOM
| UNITED STATES
| URUGUAY
| UZBEKISTAN
| VANUATU
| VATICAN CITY
| VENEZUELA
| VIETNAM
| YEMEN
| ZAMBIA
| ZIMBABWE
+-----+
196 rows in set (0.00 sec)

mysql>
```

## Learning Outcome:

- From the experiment, I learnt to implement **Java Servlets**.
- I learnt how to serve an XML document from the server-side dynamically using Java Servlets.
- I was able to integrate a MySQL database to my Java Servlet program using JDBC connector.
- I was able to pass a GET method call from my client-side using JavaScript with the use of an **XHttpRequest Object**.
- I understood the basic working and process of an **AJAX request and retrieval**.
- I was able to parse the XML document retrieved using AJAX with the help of JavaScript DOM methods like `getElementsByTagName()` and `getElementById()`.
- I modified my HTML document dynamically with JavaScript and was able to add the relevant countries as per the user's query string by creating **Node objects** and appending them as a child to a root element in the HTML page, and set its value attribute using `setAttribute()` method.
- I was able to remove all child nodes of the root element using `removeChild()` method.
- I learnt to query SQL using **Regular Expressions**.
- I understood the importance of closing SQL connections in Java once the records had been retrieved. Failure to close the connections leads to too many open connections if the user changes his/her query frequently and the program failing to work in the front-end side due to that.
- I was able to implement a working **Autocomplete Feature** using AJAX.
